

SUBJECT: Alliant Power Edge Filters

This is to inform the network that there are two types of edge filters found in our Alliant Power Isuzu® common rail injectors and the feed tubes fitted to our John Deere® common rail injectors. The filter pictured on the left hand side is known as the traditional edge filter. The filter on the right hand side is the *new* laser drilled filter. At first glance, the new laser drilled style appears as if were missing the edge filter but is not the case. The OEMs have been using this laser drilled filters in place of the traditional edge filter. You can mix and match both styles of filters with no performance issues. This also applies to the feed tubes.
