

SUBJECT: Chrysler[®] Re-flashing Guide

Chrysler has now changed flashing to include VIN licenses. This will require a purchase of a Vehicle Reprogramming Subscription (VRS). This item is not sold individually, it is sold in packs of 5. Each VRS is valid for all ECUs on a single VIN for an entire year. To purchase the VRS you can go to the <u>Diesel Forward Part Online Ordering website</u> or call our Customer Service Team. Processing can be done same day in most cases. When the order is placed please supply the MicroPod 2 number

as shown in the example below.

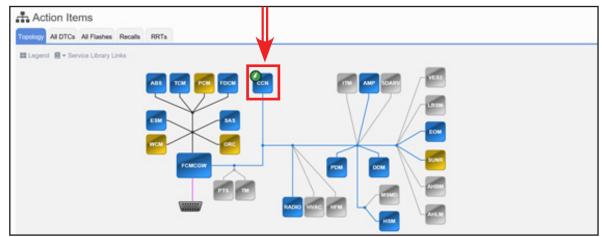

The Alliant Power Technical Department will follow up with an email or phone call, when the VRS has been loaded on to your account and WiTech2 is ready for use.

The part number for the VRS licenses is <u>AP0137</u>

Note: Multiple VRS can be preloaded onto your WiTech2 account in advance for future use on other vehicles to eliminate the down time of waiting for processing of the order.

Once logged into WiTech2 and connected to the vehicle you will see the ECM's needing to be re-flashed on the screen with a lightning bolt.

For more information visit AlliantPower.com

After selecting the module to be programmed you should see the calibration listed along with a message indicating there is a VRS license needed to re-flash the vehicle.

In addition to obtain access to this calibration, there will need to be an active subscription to Tech Authority. When prompted to log into TechAuthority in WiTech2, use log in credentials for Tech Authority not WiTech2.

Note: Tech Authority is the end user responsibility. Alliant Power does not create the Tech Authority account. <u>https://www.techauthority.com/en-us/</u>

Once a Tech Authority Online subscription and VRS have been purchased, you will then be able to flash the vehicle. Occasionally Chrysler will verify the account by sending a token to the email registered to your **Tech Authority account**, to verify your software is not being used by another shop or individual.
