

SUBJECT: Cummins® DEF Dosing Supply Modules

Bosch® supplies Cummins with four supply modules for various engines. The supply modules consist of two 12 volt modules & two 24 volt modules. The 12 volt modules are identical with the exception of the back flow connector. This also applies to the two 24 volt modules. If one needed to substitute, simply order the correct backflow connector which are available separately. The table below shows the supply module part number and the correct backflow connector that applies.

Example: A customer needs 0 444 042 132 but only has 0 444 042 134 in stock. Customer could sell the 0 444 042 134 and the 4387302 to convert it to a 0 444 042 132. The backflow connectors would have to be swapped and torqued down to 40 in-lbs.

Note: Refer to Cummins ESN & TSB150089 for correct supply module.

Bosch IAM	Cummins part number	Notes	Bosch backflow connector Cummins backflow connector	DEF Filter
<u>0 444 042 132</u>	4387304	12V - No Check Valve	4387302	1 457 436 033 Filter Kit
<u>0 444 042 133</u>	4387305	24V - No Check Valve		
<u>0 444 042 134</u>	4387657	12V - Check Valve	F 00B H40 308 4387659	
<u>0 444 042 137</u>	4387658	24V - Check Valve
